CUSTOMER EVENT

PRAGUE 2022

OASES Hints & Tips

This presentation is a collection of examples and recommendations on how data should be set in OASES and best practice in getting the right results from the system. All of these are inspired by questions on ServiceDesk, real situations that users have encountered or questions received during refresher courses.

Summary

1. ATA Build (Aircraft Skeleton) for Assemblies
2. WC11 - Workcards Effectivity – Use of Include / Exclude
3. WC11 - Workcards Relationships – Engines workcards setup
4. WC11 - New MPD tasks incorporation when “Credits from previous accomplishment” requested
5. SF15 - ADHOC WO create as an alternative for WC11 and TF52
6. SF15 – Deferred NRC rectification transfer to Aircraft Carried Forward Defect Status
7. RC10/TF52 – Use of Planned Date for Modifications
8. Stock in Consignment – Takeon and Return of the Stock

Prague 2022

1.ATA Build (Aircraft Skeleton) for Assemblies

Best practice in defining the ATA Structure for assemblies like:
Engine Fire Extinguishers, Escape Slides and Engines

This is an example of how NOT to build ATA Structure. This construction can later contribute to a Validation Error of an interchange between assemblies of the same kind.

The basic principle in building ATA Structures: *positions of the Subassemblies are related to the Upper Assembly and not to the Aircraft.*

This is an example of how the ATA Structure should be built.

2. WC11 - Workcards Effectivity – Use of Include / Exclude

Excessive use of the "Include" function for workcards effectivity can cause some routine workcards to get out of control.

Some users are tempted to use the "Included" function for effectivity control, for the simple reason that it is easier to set a card as "Included" for one aircraft registration than to set several aircraft as "Excluded".

WC11 Create/Edit Workcards - mabcloud @ OASES DEMO System, Location DEF

Packages Materials Documents Relationships Threshold/Interval Audit Notes Accomplishment Forecast Dependencies CRS Link
Base 1 Base 2 Affected Publications Measurements Extended Description Narrative Aircraft Effectivity Associated AD/SB's Access Panels

The Following Aircraft Are Included

Sub Fleet	Aircraft Reg
	G-LIFE

The recommendation is to always use the "Excluded" function to control the effectivity of MPD cards.

In this way, I am sure that I will not miss any MPD card when new airplanes enter my fleet

G-LOCO									

The use of the "Included" function for effectivity control is recommended for customized cards at the aircraft registration level. These cards can be Instructions for Structural Repairs, Inspections of Repairs, or aircraft configuration mod i.a.w. LOPA/Emergency Equipment Layout.

7. RC10/TF52 – Use of Planned Date for Modifications

This is an example of how we could use Planned Date for Modifications whose Modification Kits have a long lead time.

In AD-2017-12-14-FAA, the Modification paragraph has a Due Date of 03Dec2023. The lead time of the Modification Kit is 4 - 6 months.

To ensure that I will have the modification kit in stock, I will set the Planned Date for Modification 6 months earlier than the Due Date.

8. Stock in Consignment – Takeon and Return of the Stock

The following example is about how "Stock in Consignment" should be received and returned to the owner.

Many users are tempted to receive "Stock in Consignment" using the ST28 function. This option is used to Take on parts from a warehouse that had no part documentation available because either the parts have been discovered or acquired during a physical stock check.

Notes Exchange Order for Stock in Consignment						

The recommended process is to receive "Stock in Consignment" using an Exchange Order.

Units booked in from SERVICE EXCHANGE means that a unit will be sent back to the vendor.

Typically, it will not be the same unit as received and that the returned unit/batch will be returned in UNSERVICEABLE condition.

We will receive the components using ST11 - Goods Received from Service Exchange Order.

This option is used to book units of stock into the Inventory Database.
